

Luis Hernandez

Software Engineer – Full Stack & Data Pipelines

Escazu, San Jose, CR | +506 8718 6266 | luis.m.hernandez.cruz@gmail.com | github.com/LUHECU | luhecu.com

PROFESSIONAL SUMMARY

Software Engineer with hands-on production experience across full-cycle development — from undocumented legacy systems to greenfield builds. Proven ability to navigate high-ambiguity environments, deliver independently, and ship working software under real constraints. Strong foundation in SQL, relational databases, RESTful APIs, and data pipelines. Comfortable owning entire features across backend, frontend, and database layers with minimal oversight.

PROFESSIONAL EXPERIENCE

Full Stack Engineer · *Software Services Consulting (Confidential Client)* Jan 2025 – May 2025

Project 1: ATS Platform (HR SaaS product — greenfield development for a consulting client)

- **Sole developer on a greenfield ATS module:** built end-to-end job posting ingestion via CSV-to-database pipelines, including schema design, data normalization, and validation logic in PostgreSQL.
- **Designed and implemented a full psychometric evaluation module:** form rendering, candidate response capture, and structured persistence — owning backend, frontend (React), and database layers entirely.
- **Worked from scratch with only existing modules as reference,** no documentation, no handoffs — reverse-engineered domain logic independently.

Project 2: Medical Affiliate System (1,000+ active users, 64-table MySQL database)

- **Inherited a legacy system with 6+ months of backlog, no documentation, and a tech lead unable to provide technical guidance;** completed 10–11 of 24 high-priority user stories in under 6 weeks.
- **Navigated a 64-table MySQL schema with no ERD or documentation,** mapping relationships and business logic through code archaeology and direct database analysis using MySQL Workbench and DBeaver.
- **Identified and consciously scoped a critical permissions gap (API-level over-permissioning):** documented the risk and deferred remediation to stay within sprint scope — a deliberate technical trade-off, not an oversight.
- **Built a data reporting module** translating business requirements into SQL queries against the legacy schema with no prior context.
- **Stack: React, React Redux, Node.js (no framework), MySQL.** Frontend and backend with full ownership across both layers.

Freelance Full Stack Engineer · *Independent Client (2 projects)* Jul 2025 – Dec 2025

Project 1: Instagram Customer Support Chatbot (WATI — production with real users)

- **Designed and implemented a rule-based chatbot on WATI (Instagram),** automating 60–70% of incoming customer queries within the first month of deployment.
- **Analyzed historical chat data to identify friction patterns and drop-off points,** restructuring conversation flows based on real user behavior.
- **Architected the solution as a data pipeline:** ingestion → validation → automated response — ensuring traceability and consistency across all interactions.
- **Monitored system performance via resolution rate and response time metrics,** iterating on response logic continuously based on production data.
- **Delivered a working flow in under one week;** expanded the system over the following month based on client feedback and live usage patterns.

Project 2: Class Booking Platform (full-stack greenfield build)

- **Sole engineer and client-facing technical lead:** gathered requirements directly, translated business needs into a relational data model, and owned all architectural decisions independently.
- **Designed a normalized PostgreSQL schema (Supabase) from scratch,** applying indexing strategies and data modeling principles for performance and scalability.
- **Built secure authentication flows and data validation pipelines,** ensuring consistent user data handling across React frontend and Node.js backend.
- **Managed CI/CD pipelines and production monitoring end-to-end.** Client reference available upon request.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL, Java, C#
Frontend: React, React Redux, Angular, AstroJS, HTML/CSS, Tailwind CSS
Backend: Node.js, NestJS, RESTful API Design, Data Processing Workflows
Databases: PostgreSQL, MySQL, Oracle | **ORMs:** TypeORM, MikroORM | **Tools:** MySQL Workbench, DBeaver
Data Engineering: ELT Pipelines, Schema Design, Query Optimization, Data Validation, Data Modeling
DevOps & Tooling: Git, GitHub, Docker, CI/CD Pipelines, Azure DevOps, Linux, Vercel, Postman
Methodologies: Agile/Scrum, Sprint Planning, Technical Documentation, Legacy System Navigation

EDUCATION

B.Sc. Computer Science <i>Universidad Castro Carazo — San Jose, Costa Rica</i>	Feb 2022 – Oct 2025
Technical Diploma in Software Development <i>Colegio Tecnico Profesional de Educacion Comercial y Servicios</i>	Feb 2019 – Dec 2021

CERTIFICATIONS & LANGUAGES

Certifications: Scrum Fundamentals | Docker Fundamentals
Languages: Spanish (Native) | English (Professional proficiency — written and spoken)
